

January 22, 2004

Thomas M. Dorman
Executive Director
Kentucky Public Service Commission
211 Sower Blvd.
Frankfort, KY 40602-0615

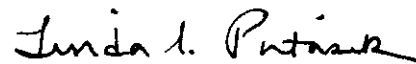

*Re: Kentucky Utilities Company - Alleged Failure To Comply With Administrative
Regulations, Case No. 2002-00049*

Dear Mr. Dorman:

Pursuant to Paragraph 3 of the Addendum to Settlement Agreement dated November 30, 2003 (approved by Commission order dated December 22, 2003), in the above-referenced docket, Kentucky Utilities Company ("KU") hereby submits the attached information regarding KU's training program on personal protective equipment.

Should you have any questions concerning the enclosed, please do not hesitate to contact me directly at 502/627-2557.

Very truly yours,

Linda S. Portasik
Counsel for Kentucky Utilities Company

Personal Protective Equipment

Personal Protective Equipment

Objective: To explain the importance for employees to use the proper personal protective equipment for the hazards they are exposed to while performing the task at hand.

I. Introduction:

- Give the title of the program: "Personal Protective Equipment: The Race to Safety"
- Inform the class there will be a test at the conclusion of the class.
- Have the participants sign the attendance (sign in) sheet.

II. Show video: "Personal Protective Equipment: The Race to Safety" V-126 (24:00)

III. Review the key points of the video.

IV. Hand out tests after the video and review.

V. Collect the completed tests and forward (with original sign-in sheets) to your Health & Safety Specialist for input into the training database for employee training hours.

Personal Protective Equipment

Topics for Review

- Workers on the job need more than just skill -- they need the right Personal Protective Equipment.
- OSHA (Occupational Health & Safety Administration) requires that the proper PPE be used whenever working in a potentially hazardous situation or environment, if engineering and administrative controls cannot be used to protect the workers from potential hazards.
- The employer will perform and document hazard assessments in the workplace to select the proper PPE to be used by the worker.
- Employees must be trained:
 - * when PPE is necessary
 - * how to properly wear and adjust the PPE
 - * the limitations of PPE
 - * the care, maintenance and disposal of PPE
- The employee must demonstrate an understanding of the training before performing any work that requires the PPE.
- PPE cannot protect you from all hazards but if used correctly it will reduce the severity of an injury.
- PPE protects only the specific part of the body it was designed to protect.

Eye Protection

- There are approximately 1,000 eye injuries every day throughout workplaces in the U.S.
- There is a variety of PPE for the eyes including:
 - * safety glasses (with and without sideshields)
 - * goggles
 - * faceshield
 - * welding helmet
 - * tinted lenses for bright light exposure

Hearing Protection

- The goal of hearing protection is not to eliminate all sound, but to reduce exposure to harmful noise.
- There are two types of hearing protection: earplugs & earmuffs
- Loud noises can be a distraction to employees and can cause nervousness and fatigue. This can make you more prone to accidents and injury.
- Noise level tests can be done in the workplace to determine if the levels are high enough to warrant hearing protection.
- Proper insertion of earplugs is essential for adequate protection.
- Earmuffs should fit snugly with a complete seal between the muff and side of the head around the ear. This means hair, hairclips, jewelry and glasses do not affect the seal.
- There are advantages and disadvantages to each form of protection. The best and most effective means of protection would be to wear both.

Head Protection

- Trauma to the head can cause paralysis or death.
- OSHA requires head protection to safeguard employee against falling objects or exposed electrical protection.
- There are 3 classes of hard hats:
 - * Class A & B -- made of non-conductive materials and offer protection from both falling objects and electrical hazards

Personal Protective Equipment

Topics for Review (continued)

- * Class B -- offers most electrical protection with protection up to 20,000 volts.
- * Class C -- these are not designed for working with electrical hazards or corrosive chemicals. They are used where only falling objects may pose a hazard.

Hand Protection

- 16% of all disabling injuries occur to the fingers and hand.
- OSHA requires gloves to be worn when there may be exposure to:
 - * absorption of harmful substances
 - * severe cuts and lacerations, abrasions or punctures
 - * chemical burns or thermal burns
 - * harmful temperature extremes
- One particular glove cannot protect you from all types of exposure.
- There are 4 classifications of gloves:
 1. General Purpose
 2. Cut Resistant
 3. Special Purpose
 4. Chemical Resistant

Feet Protection

- The average foot injury is caused by a falling object of 6 1/2 pounds and a fall of less than 4 feet.
- Foot protection also guards against puncture hazards, electrical hazards and some guard against build up of static electricity.
- Your footwear is determined by the type of work you do.
- There are rubber or specially coated footwear to protect you from chemical hazards.

Full Protective Clothing

- Chemical protective clothing is one of the most common of full body protection.
- It may be 1 piece or be made up of many parts.
- It may be re-usable to disposable.
- Re-usable suits require decontamination after each use.
- The proper type of clothing must be worn for the type of chemical you are exposed to.

Knowing Limitations of PPE

- PPE is your personal line of defense from hazards. However, it may invoke a false sense of security, which you need to guard against.
- Learn how to properly clean and dispose of your PPE.
- Be sure to look for damage or defects of your PPE.

Personal Protective Equipment

Name _____

Dept. #/Employee # _____ Date _____

Circle the correct answer

- | | | | |
|-----|---|---|---|
| 1. | T | F | It is the employer's responsibility to provide training on hazards in your workplace. |
| 2. | T | F | Wearing PPE is one way you as an employee can minimize your exposure to hazards. |
| 3. | T | F | There are 2 classes of hard hats -- 1 for electrical and 1 for falling objects. |
| 4. | T | F | Sometimes more than 1 form of eye protection will be necessary for a certain task. |
| 5. | T | F | PPE is the <u>only</u> way to deal with hazards in the workplace. |
| 6. | T | F | The employee must show they understand the training they receive on the proper use of PPE. |
| 7. | T | F | It is the employee's responsibility to tell the employer what they will need to protect them. |
| 8. | T | F | Chemical exposure is the most common need for <u>full</u> protective clothing, such as total encapsulating suits. |
| 9. | T | F | There is not <u>one</u> type of glove that can protect from all possible hazards. |
| 10. | T | F | Foot protection is chosen according to the hazard the employee will be exposed to. |
